

Subjective Questions

- 1. Which are the top three variables in your model which contribute most towards the probability of a lead getting converted?**

These are the top variables that contribute towards the result

- Total Time Spent on Website
- Total Visits
- Lead Source with elements Google

- 2. What are the top 3 categorical/dummy variables in the model which should be focused the most on in order to increase the probability of lead conversion?**

Top 3 Categorical/Dummy variables to increase probability are:

- Lead Source with elements google
- Lead Source with elements direct traffic
- Lead Source with elements organic search

- 3. X Education has a period of 2 months every year during which they hire some interns. The sales team, in particular, has around 10 interns allotted to them. So during this phase, they wish to make the lead conversion more aggressive. So they want almost all of the potential leads (i.e. the customers who have been predicted as 1 by the model) to be converted and hence, want to make phone calls to as much of such people as possible. Suggest a good strategy they should employ at this stage.**

Phone calls should be made to people if:

- They spend a lot of time on the website
- They keep coming back to the website
- They last interacted via SMS or Olark chat
- They are working professionals

- 4. Similarly, at times, the company reaches its target for a quarter before the deadline. During this time, the company wants the sales team to focus on some new work as well. So during this time, the company's aim is to not make phone calls unless it's extremely necessary, i.e. they want to minimize the rate of useless phone calls. Suggest a strategy they should employ at this stage.**

In this scenario, it's advisable to prioritize alternative methods such as automated emails and SMS. Calling should only be considered for emergencies. However, the strategy outlined above could still be applied selectively to customers with a high likelihood of purchasing the course
